With Various Size Configurations

Taylor Birch

Synopsis

Want a flexible greenhouse design that is easy to build? This book provides greenhouse plans for a PVC hoop house built on a wooden base frame (foundation). Once you understand the basic design, you will be able to build a hoop house almost any size you need. Now you can start your garden early and extend the season for a bigger harvest. This Hoop House Design: Simple, Portable, Flexible Sizes, Few Tools Required. Low cost & simple - can be built in almost any size to suit your needs. Project can be completed in just a few hours. Portable greenhouse - Hoop house can be completely removed in 5 minutes and re-assembled in 10 minutes. Hoop house can be used for entire growing season or only when needed in early spring or late fall. Requires minimal list of tools. Proven to withstand strong winds. Allows us to grow warm weather crops in our cold, high elevation climate. Protects from early and late frost & freezes. Extends growing season - start plants earlier in the spring & harvest later into the fall. Increases average temperatures, increases heat units and growing degrees days (GDD). Includes 37 Diagrams & Photos, Material Lists, Scale Drawings and Detailed Directions for Greenhouse Construction: Material lists and costs estimates for 27 different hoop house width x length x height combinations. 8 material lists with costs ranging from \$107 for a 4 x 8 foot hoop house up to \$193 for a 12 x 12 foot hoop house. Detailed scale drawing designed to help you decide what size hoop house you need. Simple directions for building, leveling and squaring the base frame. Includes detailed cut lists for lumber, pvc pipe and plastic sheeting. Includes 37 diagrams and photos. Includes 23 tables. Bonus Sections in Addition to Greenhouse Plans: Site selection, Making homemade PVC clamps, Notes on hoop house management, Using pressure treated wood in your garden, PVC safety precautions, Greenhouse & gardening resources. Customer Reviews

I returned several hoop greenhouse books that I paid 5 times as much for. The others were very "wordy" and gave no actual useable information. Except for the size they built for the book. If you are looking to build ANY size hoop house, up to 12x12, and haven't built one before, this book is for you. Practical useful information, charts, diagrams, real nice links that bring you right to the size you want to build, including materials needed without moving thru all the other sizes. I wish the author well, and hope he sells better than he hoped.

Very easy to follow. Very simplistic plans. Not a lot of materials needed. Like the idea more than the kits, of which I've bought 2 and they both failed. Mostly due to wind or too much rain (or in the case of the last one, first a little wind damage, then rain weighed it down in the area where wind had damaged a steel pole. I think PVC is definitely the way to go. These designs are easy to follow and should be easy to execute. This author has a couple other books out, one of which I also bought. It has designs specific to building a greenhouse you can walk in, has an actual door and ways to make the sides open for even more air circulation, bee pollination and ease of access. Great info!

This book covers every aspect of building a simple greenhouse regardless of your needs. This book is a blueprint that anyone can follow, it explains the building process clearly and concisely and I am confident that with this book as my guide I can successfully build the greenhouse that fits my personal needs. The fact that this book only cost .99 cents makes it a steal. If you are even remotely

considering building a greenhouse this should be your first go to book.

I found the instructions very clear and easy to follow. I will be constructing a couple different size green houses using these plans soon. It is a pity it doesn't also give metric equivalents for measurements and sizes, but I can work it out.

I found the ideas and instructions very helpful and clear. The instructions helped give me clarity on some other ideas that I want to incorporate.

A great little book with easy to understand instructions for building simple, inexpensive greenhouses and shade structures.

some good ideas for an inexpensive greenhouse. Have not implemented any yet more to follow in the spring
