I began researching beekeeping last year and this spring (2015) finally took the plunge and established hives on my farm. This book, as well other books, were quite helpful, albeit in a generic way. I soon discovered that regional differences make a huge difference in beekeeping management and hive setup. This book, and its approach with concomitant assumptions, seems to be geared toward more the northern parts of the country, assuming two deeps (or equivalents) for every hive is needed. The author at a couple spots in the book readily addresses regional differences but no specific setup differences for hives. So, one would be wise to recognize that each book, including this one, has its regional orientations and the best place for specific information ultimately is more likely your local bee association where the local practices are tried and proven for your local climate. The book does have an ad (with coupon) in the back endorsing Bee-Commerce which I would recommend folks stay away from as they short ordered me pieces of frame materials on the Deep Frames and even after my finally being able to bring it to a company representative's attention weeks ago I have yet to receive full shipment of materials purchased. When books endorse companies and their products one tends to trust those companies, right? Don't! Since I have already shared that my beehives have been installed it shouldn't have to be said that I had no choice but to buy additional frames elsewhere in order to install my scheduled bees. I shared my bee delivery schedule three weeks before bee delivery with the Bee-Commerce representative and any sense of responsibility or urgency for this shortage was a total loss on the representative I dealt with.
