Biogeochemistry: An Analysis Of Global Change, 3rd Edition

Synopsis

Biogeochemistry •winner of a 2014 Textbook Excellence Award (Texty) from the Text and Academic Authors Association •considers how the basic chemical conditions of the Earth, from atmosphere to soil to seawater, have been and are being affected by the existence of life. Human activities in particular, from the rapid consumption of resources to the destruction of the rainforests and the expansion of smog-covered cities, are leading to rapid changes in the basic chemistry of the Earth. This expansive text pulls together the numerous fields of study encompassed by biogeochemistry to analyze the increasing demands of the growing human population on limited resources and the resulting changes in the planet's chemical makeup. The book helps students extrapolate small-scale examples to the global level, and also discusses the instrumentation being used by NASA and its role in studies of global change. With extensive cross-referencing of chapters, figures and tables, and an interdisciplinary coverage of the topic at hand, this updated edition provides an excellent framework for courses examining global change and environmental chemistry, and is also a useful self-study guide. Winner of a 2014 Texty Award from the Text and Academic Authors Association

Calculates and compares the effects of industrial emissions, land clearing, agriculture, and rising population on Earth's chemistry

Synthesizes the global cycles of carbon, nitrogen, phosphorous, and sulfur, and suggests the best current budgets for atmospheric gases such as ammonia, nitrous oxide, dimethyl sulfide, and carbonyl sulfide

Includes an extensive review and up-to-date synthesis of the current literature on the Earth's biogeochemistry

Book Information

Paperback: 688 pages

Publisher: Academic Press; 3 edition (January 28, 2013)

Language: English

ISBN-10: 0123858747

ISBN-13: 978-0123858740

Product Dimensions: 1.2 x 7.5 x 9 inches

Shipping Weight: 3.3 pounds

Average Customer Review: 4.6 out of 5 stars • See all reviews • (10 customer reviews)

Best Sellers Rank: #258,270 in Books (See Top 100 in Books) #12 in Books > Science & Math > Chemistry > Geochemistry #44 in Books > Engineering & Transportation > Engineering > Civil & Environmental > Environmental > Pollution #89 in Books > Science & Math > Biological Sciences > Biology > Marine Biology

Customer Reviews

Not that there are a lot of alternatives, but this is really the best book on the topic and the update was long overdue. It is tedious to read, but incredibly rich in detail and brilliantly organized. It is very comprehensive. It is a textbook/reference, so one should not expect it to be easy reading. I would rank this close to the top among the hundreds and hundreds of textbooks/references I have read or used in my 20 years. I rarely give 5 stars to a book, but this really is brilliant.

I read the second edition as an undergraduate, and then picked this up to prep for my comprehensive PhD exams. I read it cover to cover in three weeks and found it immensely helpful. It's been meticulously updated and reorganized, and it's beautifully written. Straightforward and clearly written.

An absolute standard in Biogeochemistry. The price goes up and down on this product, so it's wise to use a price watch to catch it at the best time. No Environmental Science student should be caught without a copy of this.

This book is a clear and thorough read. It contains many great case examples, and I didn't find myself confused at any part reading through it. That being said, the appendix is atrocious. You're better off just perusing the chapter that may contain a particular concept than checking the appendix. The problem sets are a bit confusing and unclear. It can be difficult to know what the authors are asking, and the methods to calculate the answers are often not explicit.

This is a very informative text that is applicable to a variety of fields. The authors do an excellent job of bringing together data from a myriad of sources to build a compelling case for fundamental linkages between the biosphere and abiotic processes on the planet.
